**DETAILED ACTION**

***Claim Rejections - 35 USC § 102***

The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless –

(b) the invention was patented or described in a printed publication in this or a foreign country or in public use or on sale in this country, more than one year prior to the date of application for patent in the United States.

Claims 1 – 16 are rejected under 35 U.S.C. 102(b) as being anticipated by Hanson et al. (US 5,509,915).

With respect to claims 1 – 3, Hanson et al. (hereinafter “Hanson”) discloses an absorbent article comprising: an absorbent body, a liquid-permeable covering layer arranged over a first surface on the absorbent body, and a liquid-permeable liquid-transfer layer arranged between the absorbent body and the liquid-permeable covering layer, wherein the liquid-permeable covering layer comprises a nonwoven material with a pore volume distribution curve with a maximum at a pore radius greater from 55  $\mu\text{m}$  to 60  $\mu\text{m}$  and with a wetting angle of at least 120 degrees, and wherein the liquid-transfer layer comprises a fibrous layer with a pore volume distribution curve with a maximum at a pore radius of from 105 to 325  $\mu\text{m}$  as set forth in col. 26, lines 9 – 11 and col. 27, lines 16 – 32.

With reference to claims 4 and 5, Hanson discloses an absorbent article wherein the liquid-permeable covering layer comprises fibers with a fiber fineness of at least 5 dtex and the claimed basis weight as set forth in col. 22, lines 43 – 61.

Art Unit: 3761

As to claim 6, Hanson discloses an absorbent article wherein the liquid permeable covering layer comprises a spunbond nonwoven as set forth in col. 18, lines 49 – 54.

With reference to claim 7, Hanson discloses an absorbent article wherein the liquid-transfer layer comprises a polyester wadding bonded with a binding agent as set forth in col. 20, lines 52 – 56.

With reference to claims 8 – 12, see the rejection of claim 1.

Regarding claim 13, Hanson discloses an absorbent article wherein the liquid-transfer layer comprises fibers with a fiber fineness of from 6.7 to 11 dtex as set forth in col. 22, lines 43 – 61.

As to claim 14, Hanson discloses the claimed basis weight in col. 22, lines 43 – 61. The examiner considers the bulk measured at a specific load as functional. Hanson is fully capable of performing the recited function.

With reference to claim 15, see the rejection of claim 1. The examiner considers much of the claim to recite functional limitations that the article Hanson is fully capable of performing.

As to claim 16, Hanson discloses an absorbent article wherein the article comprises a liquid-impermeable covering layer located over a second surface on the absorbent body opposite the first surface, and in that the liquid-permeable covering layer and the liquid-impermeable covering layer together enclose the absorbent body as set forth in col. 6, lines 39 – 50.
